

# Cranberry Field Pump

## AgSafe Safe Work Procedures

1. Make sure that all employees are aware of any hazards that would be marked in the field before starting any pumping operation.
2. Never remove the cleanout hatch until the engine has completely stopped and the left hand toggle switch has been switched off. (Down position)
3. Employees working at the pan area are to wear high gloves while working in the cold water removing debris for long periods of time. Short periods of time are okay without gloves.
4. All employees should NOT wear clothing that is loose or baggy, as well as not be carrying any ropes with them, as these items can be caught by the pump and sucked into the pump dragging the employee with them. Possibly causing injury or death.

**\*In an emergency there is an emergency shut off cord, which will shut down the engine.\***

Please use the following **Safe Work Procedures** as a guideline to building your own safe work procedures.
