

# Truck and Trailer

## AgSafe Safe Work Procedure

In addition to complying with the general operational safety guidelines and the guidelines for electric tools the specific guidelines should be observed:

1. Ensure vehicle is equipped for the towing trailer
2. Ensure that the ball is the correct size and strength for the trailer and hitch
3. Ensure that the safety chains, brake cable, electrical connections are connected properly
4. Ensure that the load on the trailer is properly loaded and secured. Secure with proper chains and cinches or belts
5. When backing up, hold the bottom of the steering wheel with one hand. To move the trailer to the left just move the hand to the left. To move the trailer to the right, move the hand to the right. If possible have someone behind the trailer to guide you.

Please use the following **Safe Work Procedures** as a guideline to building your own safe work procedures.
