

Forage Harvester / Chopper

AgSafe Safe Work Procedure

1. Reduce the risk of injury from unplugging the equipment by selecting proper ground speed. Further reduce plugging by creating even wind rows and controlling weeds
2. Disengage PTO and shut off the tractor before dismounting to unplug or service the unit
3. Stay clear of the harvester while the blower is operating
4. Consider the extreme total weights associated with a harvester, avoid one wheel stops and side hill braking
5. Allow ample room for turns
6. Utilize counter weights on tractor front

Please use the following **Safe Work Procedures** as a guideline to building your own safe work procedures.
