

Manure Spreader

AgSafe Safe Work Procedure

1. Spreaders are a one person operation
2. Watch for flying debris
3. Operate only with operator properly seated on the tractor
4. Never allow riders on any part of the tractor or spreader
5. Use locking safety hitch pins only
6. Watch for and remove stones, boards, and other solid objects from the spreader bed
7. Prior to loading check for frozen chains or flails and loosen with a pry bar rather than attempting to free them by engaging power (utilize appropriate tractor PTO and implement shut downs prior to attempting to pry)
8. Do not service the spreader with the end gate open unless it is securely blocked to prevent it from closing
9. Never enter any enclosed spreader without good ventilation or appropriate respirator
10. Do not operate in excess of manufacturers recommended speeds

Please use the following **Safe Work Procedures** as a guideline to building your own safe work procedures.
